

DESIGNA HOSTED SERVICES - CONTROL CONTROL CENTER

All-in-one platform for the day-to-day operation of parking management systems

The web-based solution offers all the required functions for professional parking management - fully integrated in one place yet accessible from anywhere via the Internet!

All the information you need to answer customer questions promptly is available at a glance.

With the help of the DESIGNA HS CONTROL CENTER, interregional parking spaces can also be managed together using just one software solution.

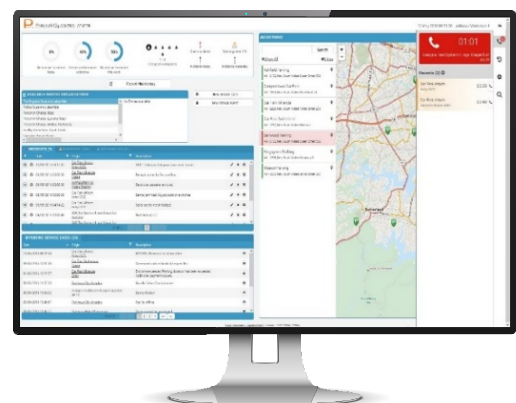

FEATURES

- Browser application ideally adapted to the remote operation of parking spaces
- Remote access to the DESIGNA system enables control via the Internet at any time
- Individually tailored workflows and scalable architecture
- Operating staff receive up-to-the-minute parking lot data and device status updates in real time
- Quick response to customer questions
- Monitoring and direct control of devices
- Dashboard for visualizing KPIs
- Analysis and classification of alarm messages and events
- Web-based application that can be operated via any Internet browser
- Interface for integrating several parking lots
- Full-scale integration of DESIGNA applied intercoms (DESIGNA VOIP and Commend/ Schneider Intercom) in the software and its processes
- Multilingual (standard languages GER, ENG, FRA)

EVERYTHINK AT A GLANCE

- Dashboard for performance display of the KPIs
- Parking lot overview, including connection to an interactive map
- Display of connected devices with status, details and history of previously executed device events
- Intercom call acceptance and call history
- Event and alarm overview
- Display of parking occupancy and counting by type of card
- Integrated workflow engine for identification and elimination of incidents

FUNCTIONS

Dashboard with KPIs

Display of current KPIs:

- Service performance
- Workstations
- Status of received incidents and alarms

Intercom

In combination with a workstation:

- Acceptance of intercom calls and direct switching to the device view
- Call management and history

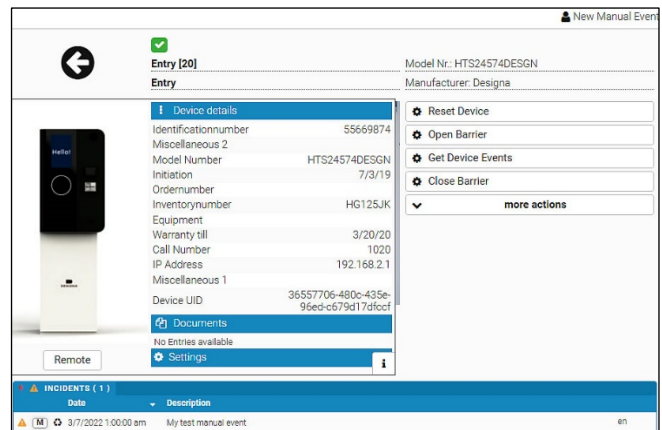

Monitoring

- Parking lot overview on an interactive map
- Device overview
- Event and alarm overview

Device status and actions

- Display of device details, e.g. pay station fill level
- Direct control of the individual devices through specific actions, e.g. gate opening/closing, creating replacement tickets, creating lost tickets
- Live streaming of integrated cameras

Event and alarm overview

Overview of events being processed

- Device and parking lot-related incidents
- Classification: Status, alarms, information

Event management

Extensive event management is available for incidents assumed by operating staff:

- Event details with status display
- Event search
- Event history

Search

Integration of an extensive central search function, e.g. searching for license plates, ticket numbers, customers, RFID, contract numbers

Documents

Option of storing documents in PDF format, e.g. operating instructions; work instructions and contact details of operating staff

Display of parking occupancy

- Parking occupancy
- Requesting counter readings by type of card

Master data management

- Central database for managing master data (system, device)

OPTIONALLY EXTENDIBLE

- Interface to DESIGNA HS BUSINESS PREBOOKING
- Interface to DESIGNA HS BUSINESS CONTRACT & FREQUENT PARKER
- Monitoring and live image display from surveillance cameras

SYSTEM REQUIREMENTS

- ABACUS system, version x21 or higher
- Secure connection to DESIGNA HOSTED SERVICE DATA CENTER.
