DESIGNA

SLIMPARK

Intro

Parking with style.

A visionary approach and a team that constantly seeks to innovate have helped us to develop groundbreaking products and services in the parking management sector for over 60 years. More than 15,000 systems have been supplied to date – and that number continues to rise daily. DESIGNA is one of the world's leading companies in fully-automated parking systems. Our passion is helping our customers maximize their success in parking management.

SLIMPARK

Product overview

SLIMPARK – even the smallest parking
garages deserve a great solution.

Large parking complexes and smaller parking facilities differ not only in size,
but across a wide range of specific requirements. In light of this, we pooled
DESIGNA's entire technological know-how and experience to develop a tailored
solution for smaller parking facilities. The result is a unique, professional and
economical parking system: SLIMPARK.

SLIMPARK is quickly and easily installed, but don't be fooled by its simplicity.
The system is powerful enough to fulfill all of the requirements placed on a
complete parking system. SLIMPARK uses barcode technology, which is parti-
cularly suited to smaller parking facilities and is able to process both short-
term parking tickets and seasonal parking cards. SLIMPARK's minimal number
of moving components is particularly practical as this considerably reduces
the requirements for maintenance and spare parts and their associated costs.
At the same time, SLIMPARK offers a maximum in user-friendliness – the lean
system is extremely simple and intuitive to operate despite its versatility.

In

- High-performance thermal printer for trouble-free ticket issue – 60-mm-wide barcode tickets
- Variable ticket length for personalization, such as logos or additional information
- User-friendly display guarantees simplicity and prevents operating errors
- Barcode scanner and EasyMove® equipment for simple processing of seasonal parking cards

Out

- High-performance barcode scanner for quick, reliable ticket processing and ensuring a smooth exit flow from the facility
- Straightforward processing of seasonal parking cards via barcode scanner or EasyMove® equipment
- User-friendly display for ease of operation

Gate

- Microprocessor-controlled
- Ideal for entry and exit control
- Automatic brake optimization ensures smooth movement and protects the mechanism
- Sensor for exact reading of barrier arm position

Pay & Pay PRO

- Pay terminal with a space-saving design that allows it to be wall-mounted or used free-standing
- Barcode scanner for exact fee and discount calculations
- Flexible payment process – accepts coins, cash and credit / debit cards
- Pay PRO terminal with cash recycler
- Thermal receipt printer for reliable printing
- Illuminated display background for enhanced user-friendliness and simplified operation
- Can print replacements for lost tickets
- Multiple display languages

® EasyMove: contactless access using transponder technology

SLIMPARK

Highlights

The system that does everything.

Using a parking garage should be a quick, convenient and pain-free experience. Unfortunately, this is as far as most parking system providers go in terms of user-friendliness. We believe the same should be true for parking facility operators. That's why we designed our SLIMPARK system to be efficient, versatile and reliable. Control – SLIMPARK's system administration tool – allows operators to monitor and manage the entire parking system. With a Microsoft operating system, SQL database and Linux operating systems on the terminal equipment, SLIMPARK is based on tried and tested international industry standards. All components are networked via Ethernet and can be monitored and controlled online via a secure connection (VPN) with the SLIM Operate application. It also offers a range of valuable analysis and reporting functions.

When it comes to the central issue of payment and discounting options, SLIMPARK offers plenty of freedom. The Cash module, for instance, is available on request and allows you to quickly and conveniently incorporate a fully-equipped manual pay station and complete the payment process using cashier staff. Disco-Online, a versatile discounting system that conveniently processes barcode discount tickets with different discount levels, is also available as an option. In short: whatever you're planning to offer, SLIMPARK can help you realize it: easily, reliably and efficiently.

Door

- Space-saving design that allows it to be wall-mounted or used free-standing
- High-performance barcode scanner for quick, reliable ticket processing

Disco-Online

- Convenient processing of discounts
- Ticket validation for direct exit

Cash

- Ideal solution for centralized payment processing by cashier staff
- Easy operation via PC
- Creation of hotel tickets, replacement tickets, vouchers and single-use tickets
- Cash & Out

Disco

- For simple and practical discounting
- Administration and printing of barcode discount tickets with credits
- Use at the automatic pay station
- Speedy processing of discounts

Control

- High-performance PC
- SQL database
- Manage and monitor via the SLIM Operate application for maximum control over the system
